D.I. Roof Seamers

“FLIP-FLOP” BI-DIRECTIONAL ROOF SEAMER FIELD MANUAL

Your Flip-Flop Roof Seamer will come packaged in this custom container. The container should not be damaged in any way. Remove the seamer from the case and visually inspect it for any type of obvious problems or damage. Along with the seamer, you will find any hand crimping tools that you may have ordered in the case. Also, there will be a field repair kit, this field manual, a certification of the roof seamer, any ordered hand tools and your shipping information.

The Flip-Flop Roof Seamer motor requires a 20 amp, 100-125 volt AC power supply. Poor performance and motor damage can result from use of an improper power supply.

Recommended extension cord size:

Distance (FT)	0-50	50-100	100-200	200+
Wire Gauge (AWG)	12	10	8	6

**READ THIS FIELD MANUAL COMPLETELY
BEFORE ANY SEAMING OPERATIONS!
DEATH OR SERIOUS INJURY MAY OCCUR!**

RENTER INFORMATION

- Rental Fees begin the day that you receive your seamer and end the day it is returned to our facility.
- Your rental fee is \$60 per day, Monday through Friday. You will not be charged for weekends. No credit will be issued against your rental fees for holidays or the inability to use this machine due to “natural acts” such as inclement weather.
- If you receive any tools with your seamer, they must be returned with the seamer to avoid any additional charges.
- **RETURN FREIGHT IS YOUR RESPONSIBILITY!**
- You will be billed for any damage, other than normal “wear and tear” from usage, found on the machine or hand tools.
- When complete, return the seamer to:

D.I. Roof Seamers

915 Highway 45

Corinth, MS 38834

- If any inconsistencies appear in the seam or if you have any questions, problems, etc... STOP SEAMING and contact Technical Support at 1-888-343-0456 immediately. Do not attempt to alter, maintenance, adjust or correct any setting on this machine without instruction from a technician.
- Follow all safety suggestions, warnings, etc... in this manual and posted on the machine itself. Failure to do so may result in serious injury or death.
- Do not attempt to ride the Roof Seamer in any way.
- For additional information, visit www.diroofseamers.com.

It is recommended to “seam as you go”. In other words, seam the roof panels as they are being installed. This ensures that each panel is kept within module and installed correctly.

If the roof has already been installed, each clip must be hand crimped with a 90° (Single Lock) Hand Crimper to keep each panel safely in place.

Before beginning, ensure that the panel is installed correctly and is free of all debris and contaminants such as sand, snow, excessive fluids, sealant/mastic, tools, extensions cords, etc... Also, always attach a safety hook to a tether during any time the seamer is on the roof to prevent it from falling off.

To begin, hand crimp 8"-10" of each panel at the beginning of the seam with the 90° (Single Lock) Hand Crimpers.

Next, place the machine on the hand crimped portion and engage the locking handle by pulling out until the handle locks into place. Add the power supply into the pigtail plug near the handle of the machine and turn the machine on. Run the seamer for about 12" to ensure that you are receiving the desired seaming operation. If so, continue in this manner for the completion of the run. If not, STOP SEAMING and contact Technical Support immediately.

Your Flip-Flop Roof Seamer is specially equipped with tooling on both sides of the machine. This is to allow you to flip the machine over at the end of a run and simply place it on the next run and, after hand crimping, send it back up.

It is important to remember to use extreme caution when reaching the edge of the roof. Stop the seamer while the wheels remain on the roof panel. Roll machine back to a safe working area before disengaging the locking handles.

Do not run the seamer within 6" of the end of a panel, beyond the end of a panel or over a previously seamed area.

Use your hand crimpers to finish any area that the seamer may not be able to complete, such as against a ridge cap, end cap or at a pitch change in the roof.

Note: The Roof Seamer may leave dark forming marks on light colored panels. This is acceptable as long as the paint finish is not damaged. Marks can easily be rubbed off by hand – DO NOT use solvents that will soften or remove paint.

In the event of any problem, contact Technical Support at
