**Applicable Credits:**

**MRc4.1 Building Product Disclosure and Optimization – Material Ingredients (1 point)**

**OPTION 1. Material Ingredients Reporting (1pt):** AEP Span products with a ZINCALUME® Plus coating have a third-party verified published, complete Health Product Declaration (HPD) with full disclosure of known hazards to at least 0.01% (100 parts per million) in compliance with the Health Product Declaration Open Standard v2.1.

**Notable Reference:**

*(Option 1)* This credit rewards projects who install at least 20 products from at least 5 different manufacturers that have published chemical inventories of products to at least 0.1% (1000 parts per million) using one of the approved reporting frameworks, including the HPD.

*AEP Span has a third-party verified HPD with full disclosure of known hazards to at least 0.01% (100 ppm) for its portfolio of products with a ZINCALUME® Plus coating, which offers a bare steel aesthetic design with proven corrosion protection and key energy efficiency attributes for building envelopes.*
SCS Global Services does hereby certify that an independent assessment has been conducted on behalf of:

ASC Profiles LLC
2110 Enterprise Boulevard, West Sacramento, CA, United States

For the following product(s):

**Metal Panels/Sheets:**
AEP Span Products with ZINCALUME Plus Substrate

*HPD Publish Date: December 14, 2017*
*HPD Screening Date: November 13, 2017*

The product(s) meet(s) all of the necessary qualifications to be certified for the following claim(s):

**Environmental Claims Validation - Health Hazard Disclosure**
This validation conforms to the Health Product Declaration Open Standard, Version 2.1 (May 1, 2017). Products have a complete, nested, material threshold HPD and have been validated for health hazard warnings sing full disclosure at an inventory threshold of 100 ppm (0.01%).

Registration #  SCS-ECV-04787
Valid from: December 14, 2017 to November 13, 2020

AEP Span Products with ZINCALUME® Plus Substrate
by ASC Profiles

CLASSIFICATION: 07 41 13 / 07 42 13 / 07 61 00 / 07 62 00 / 07 63 00 / 07 64 00

PRODUCT DESCRIPTION: Unpainted AEP Span Profiles with a ZINCALUME® (Galvalume®) substrate. AEP Span manufactures roof and siding profiles using roll forming, press break and folder operations. The manufacturing process forms coiled steel into various product shapes but does not alter the material ingredient composition of the product. As a result the underlying substrate determines the contents of the product subject to screening.

EXPIRY DATE: 2020-11-13

INVENTORY AND SCREENING NOTES:

ZINCALUME Plus is finished with a thin, clear, organic resin coating. This coating is below the 100ppm reporting threshold and therefore not detailed in Section 2. The coating aids in fabrication of final parts by providing lubricity and prevents finger printing during installation.

This section lists contents in a product based on specific threshold(s) and reports detailed health information including hazards. This HPD uses the inventory method indicated above, which is one of three possible methods:

- Basic Inventory method with Product-level threshold.
- Nested Material Inventory method with Product-level threshold
- Nested Material Inventory method with individual Material-level thresholds

Definitions and requirements for the three inventory methods and requirements for each data field can be found in the HPD Open Standard version 2.1, available on the HPDC website at: www.hpd-collaborative.org/hpd-2-1-standard

**Zincalume® Metallic Coating**
- **MATERIAL THRESHOLD:** 100 ppm
- **RESIDUALS AND IMPURITIES CONSIDERED:** No
- **RESIDUALS AND IMPURITIES NOTES:** Residuals reported per chemical analysis by steel suppliers. Guidance for considering, identifying, and quantifying residuals is in pilot test phase. Once guidance is finalized, residual information will be reviewed. Vanadium and/or Columbium may be present as residuals in steel below the inventory reporting threshold of 100ppm. Residuals that might be present above 100ppm are Copper (0.1540% max), Nickel (0.1000% max), Chromium (0.1340% max), Tin (0.0500% max), Molybdenium (0.0500% max), and Titanium (0.0100% max).
- **OTHER MATERIAL NOTES:** Zinc and aluminum metallic alloy coating (ZINCALUME® is Steelscape LLCs trade name for Galvalume®) applied to cold rolled steel through the hot dip galvanization process per the latest version of ASTM A792 Standard Specification for Steel Sheet, 55% Aluminum-Zinc Alloy Coated by the Hot Dip Process. The weight contribution of the metallic coating will vary depending on thickness of the cold rolled steel and the coating weight of zinc applied. See Section 5 for additional details.

**Aluminum**
- **HAZARDS:**
  - Respiratory: AOEC - Asthmagens Asthmagen (ARs) - sensitizer-induced - inhalable forms only
  - Endocrine: TEDX - Potential Endocrine Disruptors Potential Endocrine Disruptor
  - Physical Hazard (Reactive): EU - GHS (H-Statements) H228 - Flammable solid
  - Physical Hazard (Reactive): EU - GHS (H-Statements) H250 - Catches fire spontaneously if exposed to air
  - Physical Hazard (Reactive): EU - GHS (H-Statements) H261 - In contact with water releases flammable gases
- **SUBSTANCE NOTES:** The Priority List of Hazardous Substances (rank 179)
## Section 3: Certifications and Compliance

This section lists applicable certification and standards compliance information for VOC emissions and VOC content. Other types of health or environmental performance testing or certifications completed for the product may be provided.

## Section 4: Accessories

This section lists related products or materials that the manufacturer requires or recommends for installation (such as adhesives or fasteners), maintenance, cleaning, or operations. For information relating to the contents of these related products, refer to their applicable Health Product Declarations, if available.

### MISC ACCESSORIES OR FASTENERS

**HPD URL:** No HPD link provided

**CONDITION WHEN RECOMMENDED OR REQUIRED AND/OR OTHER NOTES:**
A wide variety of fastener and accessory products can be used in conjunction with this product. These are not manufactured by AEP Span and will depend on the preferences of the field installer.

**ACRYL-R SM5430 ROOF SEALANT**

**HPD URL:** No HPD available

**CONDITION WHEN RECOMMENDED OR REQUIRED AND/OR OTHER NOTES:**
In-line sealant can be applied to some panel profiles. This is a third party manufactured product by ITW Polymers (ACRYL-R SM5430 Roof Sealant). Product mass is approximately 0.059lb per ft when used. This results in a product weight contribution of between 3% to 10%.
Section 5: General Notes

The weight contribution of cold rolled steel, metallic coating and resin coating will vary based on the gauge (thickness) of the cold rolled steel, weight of the metallic coating specified and the surface coating weight. All figures referenced in this guide reflect unpainted 29 Ga material with a Zincalume® Plus coating (a combination of 94.599% steel and 5.40% metallic coating). This reflects the lightest standard offer base steel and heaviest metallic coating combination. All metallic AEP Products have a contribution ratio of steel between 94.599% -98.30% and a metallic coating range of 1.70-5.40%. Residuals in the cold rolled steel are reported per chemical analysis by steel suppliers. Guidance for considering, identifying, and quantifying residuals is in pilot test phase. Once guidance is finalized, residual information will be reviewed. Vanadium and/or Columbium may be present as residuals in steel below the inventory reporting threshold of 100ppm. Residuals present above 100ppm are listed in the substances inventory. Residuals in the ZINCALUME metallic coating were not considered. Specific guidelines for the determination of residuals in metal alloys have not yet been established by the Health Product Declaration Collaborative. The "Plus" portion of ZINCALUME Plus is a thin, clear, organic resin coating. It is applied at .0003 - .007% in the final product and is therefore below the 100ppm reporting threshold. The final weight contribution is dependent on the cold rolled steel thickness and weight of metallic coating applied.

---

The Health Product Declaration (HPD) Open Standard provides for the disclosure of product contents and potential associated human and environmental health hazards. Hazard associations are based on the HPD Priority Hazard Lists, the GreenScreen List Translator™, and when available, full GreenScreen® assessments. The HPD Open Standard v2.1 is not:

- a method for the assessment of exposure or risk associated with product handling or use,
- a method for assessing potential health impacts of: (i) substances used or created during the manufacturing process or (ii) substances created after the product is delivered for end use.

Information about life cycle, exposure and/or risk assessments performed on the product may be reported by the manufacturer in appropriate Notes sections, and/or, where applicable, in the Certifications section.

The HPD Open Standard was created and is supported by the Health Product Declaration Collaborative (the HPD Collaborative), a customer-led organization composed of stakeholders throughout the building industry that is committed to the continuous improvement of building products through transparency, openness, and innovation throughout the product supply chain.

The product manufacturer and any applicable independent verifier are solely responsible for the accuracy of statements and claims made in this HPD and for compliance with the HPD standard noted.
